

**SecurView® Workstation Solutions**  
Comprehensive Breast Imaging Review

**HOLOGIC®**

# Superb Digital Images, Powerful Flexibility and Advanced Diagnostics

Hologic's dedication to women's health and mammography extends to its image viewing and analysis products. The SecurView® workstations offer flexible, interactive and comprehensive diagnostic tools that radiologists need to see more clearly and work more efficiently.

SecurView workstations offer unique workflow features designed to enhance all aspects of breast imaging review, improving workflow and optimizing productivity to make every moment spent on the system effective and efficient.

## Efficiency

- Personalized ReportFlows for any clinical situation.
- Single-click navigation and intelligent roaming.

## Compatibility

- Full conformance to IHE Mammography Image Profile.
- Standardized display of mammography images for all FFDM vendors.

## Image Quality

- Choice of high quality display monitors.

## Enterprise-wide Communication

The SecurView Workstation components optimize productivity by connecting personnel and data, regardless of physical location.

- Two-way image notice communication between the radiologist on a SecurView DX workstation and the technologist on a SecurView RT workstation minimizes time away from the patient when radiologist feedback is necessary.
- SecurView Managers allow instant access to images and shared patient data across multiple workstations.
- Retrieval of prior studies from PACS can be accomplished automatically via the integrated auto-fetching capability. With the addition of the SecurXchange® Router, prior studies can be pre-fetched prior to a scheduled exam.

SecurView DX Workstation

## Optimized for Tomosynthesis

Successful introduction of a new modality like 3D breast tomosynthesis is dependent on the tools and workflow available to the radiologist at the workstation. The SecurView workstation makes the transition as seamless as possible, through extensions of familiar hanging protocols and analysis tools. SecurView software has supported the display of tomosynthesis images since 2008 and is continuously updated to offer the most advanced tools and performance.

Customized Keypad for SecurView DX

The ergonomic keypad is designed to scroll through tomosynthesis images, and to toggle easily between 2D and 3D images. The intuitive user interface allows the radiologist to focus on case review.

## Advanced Image Analytics (for 2D image set only)

Used in conjunction with Hologic's Image Analytics products, the SecurView workstation offers the radiologist the most sophisticated tools for advanced image analysis.

- ImageChecker® CAD display of Malc™ marks, and RightOn™ and PeerView™ presentation formats.
- EmphaSize™ variable size CAD marks and LesionMetrics™ ancillary CAD information.
- Breast density and biomarker assessment measurement and display with Quantra™ breast density software.
- Enhanced digitized film images with DigitalNow™ HD LookUp Tables.

<sup>1</sup> Complimentary for one year; with a service contract thereafter. Not available in all markets.

<sup>2</sup> Hardware upgrades are not included in the service contract.

## Configurable Solutions

### To View Other Modalities

- The Advanced Multimodality software option facilitates simultaneous review of additional breast imaging modalities, such as ultrasound.
- The Aegis™ MRI reading solution is designed for optimal review of breast MRI images.

### Mammography Prior Enhancement™ (MPE) Software

- The MPE software enhances prior unprocessed GE FFDM images to facilitate comparison with current Hologic 2D images.

### Application Synchronization Software

- Integrates the workstations with commonly used RIS, dictation and reporting systems

## Integrated IT Solutions

Hologic provides complete solutions for independent imaging centers; and our advanced workstations integrate with a larger facility's existing infrastructure. Our talented team of technical sales and connectivity specialists, and field engineers work closely with your facility to ensure a smooth integration with existing PACS, Reporting and RIS systems. Our SecurXchange® Archive solutions are available for sites without a PACS solution, or for sites who prefer a dedicated mammography archive. Communication begins early to ensure that a complete solution is presented to your clinical team. In addition, SecurView is designed to help you demonstrate compliance with patient privacy policies and security measures.

### Service and Support

- Onsite and online training.
- Remote technical support through Hologic Connect™ software.<sup>1</sup>
- Software upgrades incorporating the latest innovations when a SecurView system is under a service contract.<sup>2</sup>
