

A complete bed management and coordination system for healthcare facilities

Markers and erasers down

STAT Bed Management is an effective solution for optimizing bed utilization in healthcare facilities. This software offers a real-time, global view of the status of beds in your facility, replacing the outdated and chaotic white board system with a single, optimized screen. Not to mention, this solution aligns with your preexisting admission, discharge, and transfer system.

- ✓ Real-time patient localization.
- ✓ Coordination of related tasks.
- ✓ Scalable, multi-facility management.

SOLUTION FEATURES

- Ability to plan bed management according to pre-admissions, emergencies and transfers from other facilities
- Provides bed availability insights according to planned and/or confirmed discharges and planned transfers
- Displays visual warnings from a parameter-driven table for confirmed discharges that are delayed
- Provides accurate and up-to-date information for daily huddles
- Ability to reserve or block beds in situations of isolation precautions and understaffing
- Displays visual warnings for isolation rooms
- Displays the detailed grid in one or two columns completely parameter-driven by care unit, allowing users to regroup units simultaneously
- Streamlines communication with all departments in one management system, including bed management, care units, coordinators, surgery department, admission, housekeeping, stretcher-bearers
- Provides for French and English dashboards
- Easily integrates with preexisting clinical and administrative health systems
- 24/7 technical support
