

## Automated management systems for internal and inter-facility transportation

STAT Transport offers care units, departments and services with a simple and flexible system that adapts to the realities of today's healthcare landscape. STAT Transport users experience automated and optimized patient flow management while reducing expenses for all types of transportation within a single facility and between facilities. The solution validates the consistency between the type of patient, mode of transportation and support personnel to avoid any ambiguities that could lead to cancellations and long wait times. Stat Transport is your answer for safe, effective and quick patient transports within a hospital or between facilities.

### SOLUTION FEATURES

- Ensures immediate assignment of appropriate transport means and equipment with individual patients' needs resulting in considerable reduction of waiting times
- Strong algorithm ensures urgent requests and elapsed waiting times are considered in real-time for revised transport priority
- Real-time patient location status and follow up
- Immediate visibility into all transport activities through a user-friendly dashboard
- Displays transport status by priority and time allocation
- Complete integration with hospital ADT and other health information systems
- Optimizes staff time and resources with the ability to combine a patient transport with material, samples, documents, and more
- Provides management with event traceability functionality with comprehensive statistics and report module for monitoring and optimization
- Bilingual application
- 24/7 technical support

### INTER-FACILITY TRANSPORT FEATURES

- Automated optimization of transport according to patients' condition and safety, vehicle needed, on-going contracts, and more.
- Comprehensive statistics and reports capabilities for optimized bottom-line efficiency and 3rd party contracts management
- Synchronization of transport needs according to the request's criteria with built-in safety requirements for optimal patient and staff safety
- Complete visibility into transport status with accurate time stamp for billing reconciliation
- End-to-end transport activity tracking

### INTERNAL PATIENT TRANSPORT FEATURES

- Quickly associates a patient transport request to the nearest available porter for reduced wait times
- Ensures all patient transport requests are met with appropriate equipment according to patients' condition
- Complete visibility of porter status with time stamp
- Real-time notification to porters
- Provides event traceability functionality to optimize and eliminate orphan transports and strategically plans and coordinates multiple transports
