

Neuron Analytics provides intelligible data to refine decisions by clinic managers, radiologists and operational support, ultimately increasing productivity and patient satisfaction

We know your practice needs to focus on growing revenue. Whether you grow through your referral network or better utilization of your current resources, data is the key to proper decision making. Data can bring ideas and solutions to light, that perhaps you could not see before.

Neuron Analytics is a robust self-service business intelligence tool that helps radiology practices unlock critical insights in near real-time. Automated dashboards and reports eliminate the significant manual work required to analyze data allow users to identify bottlenecks and uncover opportunities for improvement.

By mining your own data, you will have everything you need at your fingertips to make sound business decisions and to satisfy health authorities' requests for accurate data and information.

Effectively manage your radiology practice

NEURON ANALYTICS' BENEFITS

Improve throughput or staff resource allocation

- Wait-time across patient flow — from booking to reporting
- Studies by hour read throughout the day
- Patient volume distribution by time

Identify staff training needs to optimize patient dose

- Image repeat analysis

Optimize equipment utilization

- Analysis of room-level utilization by site and modality

Raise patient and referral satisfaction

- Procedure analysis (reading times per radiologist)
- Exam turnaround time
- Turnaround time for each modality

Maintain profitability

- Revenue per room
- Revenue per modality

Elevate practice performance and improve your referral strategy

- Evaluation of referred exam by region, modality and physician

You can't manage what you don't measure
